

# OUR RIVER & BEACHES ARE AT RISK

The Army Corps has detailed concerns about the proposed Padnos marina by writing: **“Construction of a long, narrow basin with a single opening to the Kalamazoo River may create stagnant water conditions... accumulation of nutrients, and excess heating.”**

**NorthShore developers have offered no data to support their response that adding a gravity-flow pipeline diverting river water into the north-end of the proposed marina would circulate the basin’s water every six days and protect water quality.**

**NorthShore’s proposed solution violates simple physics and biology.**

When recently asked for clarification on the proposed gravity flow pipeline, the **NorthShore of Saugatuck lawyer stated, “We don’t have that information right now..”**

**The proposed Padnos marina violates local, state, and federal water protections.**
